## DETAILED ACTION

### *Double Patenting*

1. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

2. Claims 1-26 are rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1-28 of U.S. Patent No. 6892227. Although the conflicting claims are not identical, they are not patentably distinct from each other because:

A method for analyzing a network utilizing a zone controller (col. 18, lines 2-3, claim 1), comprising: receiving network traffic information from a plurality of host controllers (col. 18,

Art Unit: 2666

line 4; claim 1 & 20); and reporting on the network traffic information utilizing a plurality of network-based interfaces (col. 18, lines 8-9; claims 1 & 20); and wherein the host controllers are related to a zone (see claim 1); synchronizing a clock with the host controllers (claim 6); wherein the network traffic information is originally collected by a plurality of agents coupled to the host controllers (see claim 20); identifying a zone associated with each of the host controllers (claim 20); reporting on the network traffic information relating to each of the zones (col. 20, lines 60-67; claim 21); receiving maps from the host controller (claim 5); reporting on the network traffic information utilizing the maps (claim 20, f); offloading the network traffic information to a database (col. 21, lines 3-5; claim 21).

3. For claims 1-26, Applicants' claims 1-26 merely broaden the scope of the patent number 6,892,227 by eliminating the term "delay times are calculated to construct a picture of latency through-out an enterprise". It have been held that the omission of the element and its function is an obvious expedient if the remaining elements perform the same function as before. In re Karlson, 136 USPQ 184 (CCPA). Also note Ex Parte Raine, 168 USPQ 375 (bd. App. 1969) ; omission of a reference element whose function is not need would be obvious to one skill in the art.
